* A tag is marked EOL, when the last driver it supports goes EOL (e.g. 11.4.3 will be marked EOL on Jul-2024)
or when a new patch version is released (e.g. after 12.1.1 release, 12.1.0 is marked EOL)
* Containers marked EOL are available for atleast 6 months from EOL date
* Additionally "build.sh" script can be used to build containers for any tags released in the past and deprecated

** Plan is to support 2 major CUDA versions at any given time (e.g. 11 & 12 or 12 & 13)
i.e. 11 will be marked EOL, after 13 is released. If 11 is already past deletion date based on other conditions,
a month will be added to 11's deletion time to avoid disruption and provide ample time for customers
to plan the transition

* C for nvidia driver compatible
